KCE PATHWAYS · GRADES 4-5 · UNIT 3: BUILDING THINGS · WEEK 15 · SCIENCE CHECKPOINT

Science Checkpoint: Unit 3

Name: _____ **Date:** _____

PRE-LESSON WARM-UP · DO THIS BEFORE YOUR COMPUTER LESSON

What Do I Remember?

Before the checkpoint, write what you remember from Weeks 11–14. Be honest about what you are unsure of. It is OK to guess!

1. Which Unit 3 idea do you feel sure about? Explain it in one or two sentences.

2. Which idea are you still unsure of? Write what confuses you about it.

3. From memory, explain the difference between a physical change and a chemical change. Give one example of each.

4. Draw a circuit from memory that would light a bulb. Label the battery, wires, bulb and switch.

5. Name one scientist, inventor or doctor from Unit 3 and what they did.

Science Checkpoint: Unit 3

Name: _____ **Date:** _____

POST-LESSON CHALLENGE · DO THIS AFTER YOUR COMPUTER LESSON

Show What I Learned in Unit 3

Use evidence and vocabulary from all four weeks to explain your thinking.

1. Follow the energy from your breakfast to a kicked ball. Explain how your body systems and energy changes work together. Use at least four vocabulary words.

2. Choose one Unit 3 investigation (sealed bottle, circuit tester, friction ramp or heart rate). What did it show, and what made it a fair test?

3. Look back at Page 1. What did you get right, and what do you understand better now?

4. Connect two weeks: explain how choosing the right material (like copper, rubber, oil or tire tread) solves a problem with electricity or friction.

★ **Challenge:** Design a fair test about any Unit 3 idea, such as which surface stops a toy car soonest or whether warm or cold water dissolves sugar faster. Write your question, your hypothesis, the variable you will change, what you will measure, two things you will keep the same, and how many trials you will run.

Looking Ahead: You finished all 15 weeks of KCE Pathways Science! You studied living things, Earth and space, and now matter, energy, forces and your own body, and you learned to ask, "What is the evidence?" Keep exploring: keep a science notebook, and each week write down one change you notice around you, ask what caused it, and test it safely with a parent.
