KCE PATHWAYS · GRADE 3 · UNIT 3: MARKET DAYS · WEEK 13 · MATH

Squares in the Rice Paddies — Teacher Lesson Plan & Answer Key

Learning objectives: Students find the area of rectangles by counting unit squares and by multiplying rows × columns, name area in square units (square centimeters, square meters), and find the area of L-shaped figures by splitting them into two rectangles and adding.

Duration: 35–45 minutes
Materials: Computer or tablet with the lesson open · pencil · printed Pre & Post sheet

Lesson flow (as it appears on screen)

1. Title & name capture: student types first and last name so results go to KingCretot Experience; read the Pathway Points rules together.
2. Warm-Up: Week 12 Review (12 points): division facts, a fact-family item, and an unknown-number item. Ask: "What multiplication fact helps you divide?"
3. Picture It: the Mekong Delta rice village (scene art and 7 facts). Point out that a map of paddies looks like a grid of squares.
4. Word Wrangler: 6 flip cards (area, unit square, square unit, row, column, decompose) plus the "no gaps, no overlaps" rule.
5. Pencil Break (Pre): student completes the Pre side of the printed sheet before any teaching.
6. Counting Unit Squares: seedling tray of 12 unit squares; Let's Try Together counts a non-rectangle (5 + 3 = 8). Three scored items (12 points). Have the student touch and count each square once.
7. Rows × Columns: 4 rows of 6 = 24 square units; Together: 5 × 7 = 35. Three scored items (12 points). Connect to arrays and equal groups from Weeks 11–12.
8. Square Units: 1 meter by 1 meter = 1 square meter; mat 2 × 5 = 10 square meters; label 8 × 3 = 24 square centimeters. Three scored items (12 points). Insist on the unit name: "square meters," not "meters."
9. Splitting L-Shaped Fields: decompose an L into two rectangles, find each area, add (10 + 8 = 18); a second split (6 + 12 = 18) gives the same area. Three scored items (12 points). Common error: multiplying the two parts.
10. Bonus Practice (XP only, no Pathway Points): 4 area items including a two-step problem.
11. Match-Up Round (10 points): 5 pairs, 2 points per first-try match.
12. Fix the Sentence (10 points): 2 typed items (capital at the start, end mark, commas in a list). The corrected sentence shows after the 2nd miss.
13. Speed Arena + Keyboard Corral (XP only).
14. Boss Battle (20 points): two-step area problem, "which explanation is correct?", L-shape area, and "find the mistake."
15. Pencil Break (Post): student completes the Post side and the star challenge.
16. Results: score, mastery message (85+ earns congratulations and confetti), results sent to KingCretot Experience; reminder to finish the Post-Lesson Challenge.

Lesson answer key with reasoning

Every scored item the student sees, in order, across all three rotating question sets. The "why" is the same reasoning shown on screen after a second missed try.

WARM-UP: WEEK 12 REVIEW (4 POINTS EACH)

ID	Question	Answer	Why (explain to student)
w1_s0	Set 1. 56 ÷ 8 = ___	**7**	56 ÷ 8 = 7 because 7 × 8 = 56.
w2_s0	Set 1. Which fact is in the same fact family as 6 × 9 = 54? Choices: 54 ÷ 9 = 6 / 54 − 9 = 45 / 6 + 9 = 15 / 9 × 9 = 81	**54 ÷ 9 = 6**	A fact family uses the same three numbers, 6, 9, and 54, with multiplication and division. 54 ÷ 9 = 6 belongs.
w3_s0	Set 1. Find the unknown number. 4 × ? = 36	**9**	4 × 9 = 36, so the unknown number is 9. You can check with 36 ÷ 4 = 9.
w1_s1	Set 2. 42 ÷ 6 = ___	**7**	42 ÷ 6 = 7 because 7 × 6 = 42.
w2_s1	Set 2. Which fact is in the same fact family as 4 × 7 = 28? Choices: 28 ÷ 7 = 4 / 28 − 7 = 21 / 4 + 7 = 11 / 7 × 7 = 49	**28 ÷ 7 = 4**	A fact family uses the same three numbers, 4, 7, and 28, with multiplication and division. 28 ÷ 7 = 4 belongs.
w3_s1	Set 2. Find the unknown number. ? ÷ 5 = 8	**40**	8 × 5 = 40, so 40 ÷ 5 = 8. The unknown number is 40.
w1_s2	Set 3. 63 ÷ 9 = ___	**7**	63 ÷ 9 = 7 because 7 × 9 = 63.
w2_s2	Set 3. Which fact is NOT in the fact family for 3, 8, and 24? Choices: 24 − 8 = 16 / 8 × 3 = 24 / 24 ÷ 3 = 8 / 24 ÷ 8 = 3	**24 − 8 = 16**	The fact family for 3, 8, and 24 is 3 × 8 = 24, 8 × 3 = 24, 24 ÷ 3 = 8, and 24 ÷ 8 = 3. Subtraction does not belong.
w3_s2	Set 3. Find the unknown number. 6 × ? = 48	**8**	6 × 8 = 48, so the unknown number is 8. Check: 48 ÷ 6 = 8.

COUNTING UNIT SQUARES (4 POINTS EACH)

ID	Question	Answer	Why (explain to student)
t1a_s0	Set 1. [Picture: grid of 3 rows and 5 columns] Minh covered a seedling tray with unit squares. Count the squares. What is the area of the tray?	**15 square units**	Count every unit square: 3 rows of 5 squares is 15 squares, so the area is 15 square units.
t1b_s0	Set 1. Which explanation is correct? Linh says unit squares must cover a shape with no gaps and no overlaps. Minh says it is okay to leave gaps between the squares. Choices: Linh is correct. / Minh is correct. / They are both correct. / Neither one is correct.	**Linh is correct.**	If there are gaps, part of the shape is not counted. If squares overlap, part is counted twice. So there can be no gaps and no overlaps.
t1c_s0	Set 1. [Picture: grid of 3 rows and 3 columns] Find the mistake. Minh counted only the squares around the edge of this mat and said the area is 8 square units. What is wrong? Choices: Area counts every square inside the shape too, so the area is 9 square units. / Nothing is wrong. The area is 8 square units. / The area is 3 square units. / He should count the sides instead of the squares.	**Area counts every square inside the shape too, so the area is 9 square units.**	There are 8 squares around the edge and 1 square in the middle. Area counts all of them: 8 + 1 = 9 square units.
t1a_s1	Set 2. [Picture: 3 by 4 grid with 3 shaded squares in the top row, 2 in the middle row, 2 in the bottom row] Count the shaded unit squares. What is the area of the shaded part of the mat?	**7 square units**	Count the shaded squares row by row: 3 + 2 + 2 = 7 square units. The white squares are not part of the shape.

ID	Question	Answer	Why (explain to student)
t1b_s1	Set 2. What does area measure? Choices: the space inside a flat shape / the distance around a shape / how heavy a shape is / how tall a shape is	**the space inside a flat shape**	Area is the amount of space inside a flat shape. We measure it by counting unit squares.
t1c_s1	Set 2. Find the mistake. Minh put 6 unit squares on a mat, but he left gaps between them. He says the area of the mat is 6 square units. What is wrong? Choices: The gaps are part of the mat too, so the area is more than 6 square units. / Nothing is wrong. / Gaps make the mat smaller, so the area is less than 6 square units. / Area is never measured with squares.	**The gaps are part of the mat too, so the area is more than 6 square units.**	The 6 squares do not cover the whole mat. The gaps are part of the mat, so the mat has more than 6 square units of area.
t1a_s2	Set 3. [Picture: grid of 4 rows and 4 columns] Linh covered a drying mat with unit squares. Count the squares. What is the area of the mat?	**16 square units**	There are 4 rows with 4 squares in each row. 4 + 4 + 4 + 4 = 16, so the area is 16 square units.
t1b_s2	Set 3. Linh covers a mat with unit squares. There are no gaps and no overlaps. She counts 15 squares. What is the area of the mat? Choices: 15 square units / 15 units long / 30 square units / 5 square units	**15 square units**	Each unit square covers 1 square unit, so 15 squares cover 15 square units.
t1c_s2	Set 3. [Picture: grid of 2 rows and 3 columns] Which explanation is correct? Minh says the area of this shape is 6 square units because 6 unit squares cover it. Linh says the area is 10 square units because she counted the sides around the outside. Choices: Minh is correct. / Linh is correct. / They are both correct. / Neither one is correct.	**Minh is correct.**	Area counts the unit squares inside the shape: 6 square units. Counting the sides around the outside measures something different.

ROWS × COLUMNS (4 POINTS EACH)

ID	Question	Answer	Why (explain to student)
t2a_s0	Set 1. [Picture: grid of 3 rows and 7 columns] This paddy map has 3 rows with 7 squares in each row. Use rows and columns. What is the area?	**21 square units**	3 rows × 7 squares in each row = 21 square units.
t2b_s0	Set 1. Which multiplication fact gives the area of a grid with 6 rows and 8 columns? Choices: 6 × 8 / 6 + 8 / 6 × 6 / 8 + 8 + 8	**6 × 8**	Rows times columns gives the area: 6 × 8 = 48 square units.
t2c_s0	Set 1. Find the mistake. Minh says a grid with 5 rows and 8 columns has an area of 13 square units. What is wrong? Choices: He added. He should multiply: 5 × 8 = 40 square units. / It should be 5 × 5 = 25 square units. / Nothing is wrong. / It should be 8 − 5 = 3 square units.	**He added. He should multiply: 5 × 8 = 40 square units.**	5 + 8 = 13 adds the rows and columns. Area is rows times columns: 5 × 8 = 40 square units.

ID	Question	Answer	Why (explain to student)
t2a_s1	Set 2. [Picture: grid of 4 rows and 8 columns] This paddy map has 4 rows with 8 squares in each row. Use rows and columns. What is the area?	**32 square units**	4 rows × 8 squares in each row = 32 square units.
t2b_s1	Set 2. Which explanation is correct? Linh says a grid with 7 rows and 3 columns has the same area as a grid with 3 rows and 7 columns. Minh says the grid with 7 rows is bigger. Choices: Linh is correct, because 7 × 3 and 3 × 7 are both 21. / Minh is correct, because 7 is bigger than 3. / They are both correct. / Neither one is correct.	**Linh is correct, because 7 × 3 and 3 × 7 are both 21.**	Turning a grid on its side does not change how many squares it has: 7 × 3 = 3 × 7 = 21 square units.
t2c_s1	Set 2. A small seedling tray has 6 rows with 9 cells in each row. Each cell is 1 square unit. What is the area of the tray?	**54 square units**	6 rows × 9 cells in each row = 54 square units.
t2a_s2	Set 3. [Picture: grid of 5 rows and 6 columns] This paddy map has 5 rows with 6 squares in each row. Use rows and columns. What is the area?	**30 square units**	5 rows × 6 squares in each row = 30 square units.
t2b_s2	Set 3. A grid has 9 rows with 3 squares in each row. Which shows the area? Choices: 9 × 3 = 27 square units / 9 + 3 = 12 square units / 9 × 3 = 24 square units / 3 × 3 = 9 square units	**9 × 3 = 27 square units**	9 rows of 3 squares is 9 × 3 = 27 square units.
t2c_s2	Set 3. Find the mistake. Linh says a grid with 7 rows and 7 columns has an area of 14 square units. What is wrong? Choices: She added 7 + 7. The area is 7 × 7 = 49 square units. / The area is 7 square units. / Nothing is wrong. / The area is 77 square units.	**She added 7 + 7. The area is 7 × 7 = 49 square units.**	Area is rows times columns, not rows plus columns: 7 × 7 = 49 square units.

SQUARE UNITS (4 POINTS EACH)

ID	Question	Answer	Why (explain to student)
t3a_s0	Set 1. [Picture: rectangle labeled 6 meters by 3 meters] A drying mat is 6 meters long and 3 meters wide. What is its area in square meters?	**18 square meters**	Multiply the side lengths: 6 × 3 = 18 square meters.
t3b_s0	Set 1. Which unit could measure the area of a rice paddy? Choices: square meters / meters / kilograms / liters	**square meters**	Area is measured in square units. A paddy is big, so square meters is a good unit.
t3c_s0	Set 1. Which explanation is correct? Minh says a mat 4 meters long and 2 meters wide has an area of 8 meters. Linh says its area is 8 square meters. Choices: Linh is correct, because area is measured in square units. / Minh is correct, because the sides are in meters. / They are both correct. / Neither one is correct.	**Linh is correct, because area is measured in square units.**	4 × 2 = 8, and area is always named in square units, so the area is 8 square meters.

ID	Question	Answer	Why (explain to student)
t3a_s1	Set 2. [Picture: rectangle labeled 7 centimeters by 4 centimeters] A seed packet label is 7 centimeters long and 4 centimeters wide. What is its area in square centimeters?	**28 square centimeters**	Multiply the side lengths: 7 × 4 = 28 square centimeters.
t3b_s1	Set 2. A square is 1 meter long on each side. How much area does it cover? Choices: 1 square meter / 4 square meters / 1 meter / 2 square meters	**1 square meter**	A square that is 1 meter on each side covers exactly 1 square meter. 4 meters is the distance around it, not its area.
t3c_s1	Set 2. Find the mistake. Linh found the area of a mat that is 9 meters long and 2 meters wide. She wrote 9 + 2 = 11 square meters. What is wrong? Choices: She should multiply: 9 × 2 = 18 square meters. / She should subtract: 9 − 2 = 7 square meters. / Nothing is wrong. / The answer should be 11 meters.	**She should multiply: 9 × 2 = 18 square meters.**	To find the area of a rectangle, multiply the side lengths: 9 × 2 = 18 square meters.
t3a_s2	Set 3. [Picture: rectangle labeled 8 meters by 5 meters] A small paddy is 8 meters long and 5 meters wide. What is its area in square meters?	**40 square meters**	Multiply the side lengths: 8 × 5 = 40 square meters.
t3b_s2	Set 3. A rectangle is 3 centimeters long and 6 centimeters wide. What is its area? Choices: 18 square centimeters / 18 centimeters / 9 square centimeters / 36 square centimeters	**18 square centimeters**	3 × 6 = 18, and area is named in square units: 18 square centimeters.
t3c_s2	Set 3. Which explanation is correct? Why can you multiply the side lengths of a rectangle to find its area? Choices: The side lengths tell how many rows there are and how many unit squares are in each row. / Because you always multiply any two numbers you see. / Because adding the sides gives the area. / You cannot. You must always count one square at a time.	**The side lengths tell how many rows there are and how many unit squares are in each row.**	The side lengths tell how many rows there are and how many unit squares are in each row. A rectangle 8 meters long and 5 meters wide has 5 rows of 8 one-meter squares, so 5 × 8 = 40 square meters.

SPLITTING L-SHAPED FIELDS (4 POINTS EACH)

ID	Question	Answer	Why (explain to student)
t4a_s0	Set 1. [Picture: L shape: green part 4 rows of 2 squares, gold part 2 rows of 3 squares] This L-shaped paddy is split into two rectangles. What is the total area?	**14 square units**	Green part: 4 rows of 2 squares, 4 × 2 = 8. Gold part: 2 rows of 3 squares, 2 × 3 = 6. Add: 8 + 6 = 14 square units.
t4b_s0	Set 1. Linh splits an L-shaped field into a 3 by 4 rectangle and a 2 by 5 rectangle. Which shows how to find the total area? Choices: 3 × 4 + 2 × 5 / 3 × 4 × 2 × 5 / 3 + 4 + 2 + 5 / 3 × 4 − 2 × 5	**3 × 4 + 2 × 5**	Find the area of each rectangle, then add: 3 × 4 + 2 × 5 = 12 + 10 = 22 square units.

ID	Question	Answer	Why (explain to student)
t4c_s0	Set 1. Find the mistake. Minh found that the two parts of an L shape have areas of 15 square units and 6 square units. He multiplied 15 × 6 = 90 square units. What is wrong? Choices: He should add the two parts: 15 + 6 = 21 square units. / He should subtract: 15 − 6 = 9 square units. / Nothing is wrong. / 15 × 6 is not 90.	**He should add the two parts: 15 + 6 = 21 square units.**	The two parts together make the whole shape, so you add their areas: 15 + 6 = 21 square units.
t4a_s1	Set 2. [Picture: L shape: green part 3 meters by 5 meters, gold part 4 meters by 2 meters] Grandma Hoa's L-shaped vegetable garden is split into two rectangles. What is the total area in square meters?	**23 square meters**	Green part: 5 × 3 = 15. Gold part: 4 × 2 = 8. Add: 15 + 8 = 23 square meters.
t4b_s1	Set 2. Which explanation is correct? Linh says you can split an L shape into two rectangles and add their areas. Minh says you can only find the area of rectangles, never L shapes. Choices: Linh is correct. / Minh is correct. / They are both correct. / Neither one is correct.	**Linh is correct.**	An L shape can be decomposed into two rectangles. Find each area and add them to get the area of the whole L shape.
t4c_s1	Set 2. [Picture: L shape: green part 2 rows of 6 squares, gold part 3 rows of 3 squares] Use rows and columns for each part. What is the area of this L-shaped mat?	**21 square units**	Green part: 2 rows of 6 squares, 2 × 6 = 12. Gold part: 3 rows of 3 squares, 3 × 3 = 9. Add: 12 + 9 = 21 square units.
t4a_s2	Set 3. [Picture: L shape: green part 4 rows of 3 squares, gold part 2 rows with 4 squares in each row] This L-shaped paddy is split into two rectangles. What is the total area?	**20 square units**	Green part: 4 rows of 3 squares, 4 × 3 = 12. Gold part: 2 rows with 4 squares in each, 2 × 4 = 8. Add: 12 + 8 = 20 square units.
t4b_s2	Set 3. An L-shaped field is split into a rectangle 6 meters by 2 meters and a square 3 meters by 3 meters. What is the total area? Choices: 21 square meters / 14 square meters / 12 square meters / 108 square meters	**21 square meters**	6 × 2 = 12 and 3 × 3 = 9. Add the parts: 12 + 9 = 21 square meters.
t4c_s2	Set 3. Find the mistake. Linh split an L shape into a 4 by 2 rectangle and a 3 by 5 rectangle. She wrote 4 × 2 = 8 and 3 × 5 = 15, so the total is 8 + 15 = 22 square units. What is wrong? Choices: 8 + 15 is 23, not 22. / 4 × 2 is not 8. / 3 × 5 is not 15. / Nothing is wrong.	**8 + 15 is 23, not 22.**	Both products are right, but the sum is wrong: 8 + 15 = 23 square units.

MATCH-UP ROUND (2 POINTS PER FIRST-TRY MATCH)

ID	Question	Answer	Why (explain to student)
m1_s0	Set 1. 3 × 6 grid	**18 square units**	3 × 6 grid = 18, so the area is 18 square units.
m2_s0	Set 1. 4 × 5 grid	**20 square units**	4 × 5 grid = 20, so the area is 20 square units.
m3_s0	Set 1. 7 × 3 grid	**21 square units**	7 × 3 grid = 21, so the area is 21 square units.
m4_s0	Set 1. 9 × 4 grid	**36 square units**	9 × 4 grid = 36, so the area is 36 square units.

ID	Question	Answer	Why (explain to student)
m5_s0	Set 1. 8 × 2 grid	**16 square units**	8 × 2 grid = 16, so the area is 16 square units.
m1_s1	Set 2. area	**space inside a flat shape**	“area” means space inside a flat shape.
m2_s1	Set 2. unit square	**a square with 1-unit sides**	“unit square” means a square with 1-unit sides.
m3_s1	Set 2. row	**squares going across**	“row” means squares going across.
m4_s1	Set 2. column	**squares going up and down**	“column” means squares going up and down.
m5_s1	Set 2. decompose	**break into smaller parts**	“decompose” means break into smaller parts.
m1_s2	Set 3. 2 × 3 + 4 × 2	**14 square units**	2 × 3 + 4 × 2 = 14, so the area is 14 square units.
m2_s2	Set 3. 3 × 3 + 2 × 5	**19 square units**	3 × 3 + 2 × 5 = 19, so the area is 19 square units.
m3_s2	Set 3. 4 × 4 + 2 × 3	**22 square units**	4 × 4 + 2 × 3 = 22, so the area is 22 square units.
m4_s2	Set 3. 6 × 2 + 3 × 3	**21 square units**	6 × 2 + 3 × 3 = 21, so the area is 21 square units.
m5_s2	Set 3. 7 × 2 + 2 × 3	**20 square units**	7 × 2 + 2 × 3 = 20, so the area is 20 square units.

FIX THE SENTENCE (5 POINTS EACH)

ID	Question	Answer	Why (explain to student)
fs1_s0	Set 1. Fix the sentence: linh plants rice in the paddy	**Linh plants rice in the paddy.**	Linh is a name and starts the sentence, so it gets a capital L. A telling sentence ends with a period.
fs2_s0	Set 1. Fix the sentence: we saw boats bananas and coconuts	**We saw boats, bananas, and coconuts. (also accepted: We saw boats, bananas and coconuts.)**	Start with a capital W, put commas between the things in the list, and end with a period.
fs1_s1	Set 2. Fix the sentence: minh counted the seedlings	**Minh counted the seedlings.**	Minh is a name and starts the sentence, so it gets a capital M. End the telling sentence with a period.
fs2_s1	Set 2. Fix the sentence: grandma sells rice beans and mangoes	**Grandma sells rice, beans, and mangoes. (also accepted: Grandma sells rice, beans and mangoes.)**	Start with a capital G, put commas between rice, beans, and mangoes, and end with a period.
fs1_s2	Set 3. Fix the sentence: what is the area of the mat	**What is the area of the mat?**	Start with a capital W. This sentence asks something, so it ends with a question mark.

ID	Question	Answer	Why (explain to student)
fs2_s2	Set 3. Fix the sentence: linh dried rice beans and corn	**Linh dried rice, beans, and corn. (also accepted: Linh dried rice, beans and corn.)**	Linh is a name and starts the sentence, so it gets a capital L. Put commas between rice, beans, and corn, and end with a period.

BOSS BATTLE (5 POINTS EACH)

ID	Question	Answer	Why (explain to student)
bb1_s0	Set 1. Two steps! Grandma Hoa's paddy is 8 meters long and 6 meters wide. She has already planted 20 square meters. How many square meters are left to plant?	**28 square meters**	Step 1: 8 × 6 = 48 square meters in all. Step 2: 48 − 20 = 28 square meters left.
bb2_s0	Set 1. Which explanation is correct? Linh and Minh split the same L-shaped mat in two different ways. Linh got 9 + 8 = 17 square units. Minh got 5 + 12 = 17 square units. Choices: That makes sense. Splitting a shape a different way does not change its area. / That is impossible. Different splits must give different areas. / Only one of them can be right. / They should multiply 9 × 8 instead.	**That makes sense. Splitting a shape a different way does not change its area.**	The mat is the same size no matter where you draw the line, so both ways give 17 square units.
bb3_s0	Set 1. [Picture: L shape: green part 2 meters by 6 meters, gold part 5 meters by 3 meters] The family's L-shaped rice field is split into two rectangles. What is the total area in square meters?	**27 square meters**	Green part: 2 × 6 = 12. Gold part: 5 × 3 = 15. Add: 12 + 15 = 27 square meters.
bb4_s0	Set 1. Find the mistake. Minh says a mat that is 5 meters long and 5 meters wide has an area of 10 square meters. What is wrong? Choices: He added. 5 × 5 = 25 square meters. / It should be 10 meters. / Nothing is wrong. / It should be 55 square meters.	**He added. 5 × 5 = 25 square meters.**	Area is length times width: 5 × 5 = 25 square meters. 5 + 5 = 10 is not the area.
bb1_s1	Set 2. Two steps! Linh's family has two drying mats. One is 4 meters by 3 meters. The other is 5 meters by 2 meters. What is the total area of both mats in square meters?	**22 square meters**	Step 1: 4 × 3 = 12 and 5 × 2 = 10. Step 2: 12 + 10 = 22 square meters.
bb2_s1	Set 2. [Picture: grid of 3 rows and 5 columns] Find the mistake. Linh says this grid has an area of 8 square units because 3 + 5 = 8. What is wrong? Choices: She should multiply: 3 × 5 = 15 square units. / The area is 35 square units. / Nothing is wrong. / She should subtract: 5 − 3 = 2.	**She should multiply: 3 × 5 = 15 square units.**	The grid has 3 rows of 5 squares. Rows times columns: 3 × 5 = 15 square units.
bb3_s1	Set 2. A small seedling tray has 7 rows with 8 cells in each row. Each cell is 1 square unit. What is the area of the tray?	**56 square units**	7 rows × 8 cells in each row = 56 square units.

ID	Question	Answer	Why (explain to student)
bb4_s1	Set 2. Which explanation is correct? Why do we say square meters when we give the area of a field? Choices: Area is found by counting squares that are 1 meter on each side. / Fields are always shaped like squares. / We add the four sides of the field. / Meters are only used for squares.	**Area is found by counting squares that are 1 meter on each side.**	One square meter is a square 1 meter on each side. The area tells how many of those squares cover the field.
bb1_s2	Set 3. Two steps! A paddy is 9 meters long and 5 meters wide. A path covers 5 square meters of it. How many square meters are left for rice?	**40 square meters**	Step 1: 9 × 5 = 45 square meters in all. Step 2: 45 − 5 = 40 square meters left for rice.
bb2_s2	Set 3. An L-shaped mat is made of a 4 by 3 rectangle and a 2 by 2 square. Which shows its area? Choices: 4 × 3 + 2 × 2 = 16 square units / 4 × 3 × 2 × 2 = 48 square units / 4 + 3 + 2 + 2 = 11 square units / 4 × 3 + 2 × 2 = 14 square units	**4 × 3 + 2 × 2 = 16 square units**	4 × 3 = 12 and 2 × 2 = 4. Add the parts: 12 + 4 = 16 square units.
bb3_s2	Set 3. [Picture: L shape: green part 3 rows of 5 squares, gold part 3 rows of 2 squares] Use rows and columns for each part. What is the area of this L-shaped mat?	**21 square units**	Green part: 3 rows of 5 squares, 3 × 5 = 15. Gold part: 3 rows of 2 squares, 3 × 2 = 6. Add: 15 + 6 = 21 square units.
bb4_s2	Set 3. Find the mistake. Linh says a mat that is 6 meters long and 4 meters wide has an area of 24 meters. What is wrong? Choices: The number is right, but the unit should be square meters. / It should be 10 square meters. / Nothing is wrong. / It should be 64 square meters.	**The number is right, but the unit should be square meters.**	6 × 4 = 24 is right, but area is named in square units: 24 square meters.

Pre & Post sheet answer guide

Many items are open-ended. Grade for genuine understanding and complete sentences, not exact wording.

PRE-LESSON WARM-UP

#	Prompt	Model answer / grading note
1	Area of a 2-row by 5-square rectangle	10 square units (drawing shows 2 rows of 5 squares)
2	What does area measure?	the space inside a flat shape
3	Paddy map: 3 rows of 5 squares	15 square units (3 × 5 = 15)
4	Multiplication fact for 6 rows and 2 columns	6 × 2 = 12 (2 × 6 = 12 also correct); area 12 square units
5	Review: 35 ÷ 7 and one more fact-family fact	5; any of 5 × 7 = 35, 7 × 5 = 35, 35 ÷ 5 = 7

POST-LESSON CHALLENGE

#	Prompt	Model answer / grading note
1	Drying mat 7 m by 4 m	28 square meters (7 × 4 = 28); the unit must be square meters
2	L-shaped garden: 5 m by 2 m plus 3 m by 3 m	5 × 2 = 10 and 3 × 3 = 9; 10 + 9 = 19 square meters

#	Prompt	Model answer / grading note
3	Minh says a 6 by 3 rectangle has an area of 9 square units	The area is 18 square units, because 6 × 3 = 18. (Minh added; "18 units" names the wrong unit.)
4	Two steps: 8 m by 5 m paddy, 15 square meters planted	8 × 5 = 40 square meters; 40 − 15 = 25 square meters left
5	Two different rectangles with area 12 square units	Any two of: 1 × 12, 2 × 6, 3 × 4 (a turned rectangle like 4 × 3 counts as the same one); side lengths labeled

★ CHALLENGE

#	Prompt	Model answer / grading note
1	L-shaped paddy: left part 3 m by 6 m, bottom part 8 m across and 2 m tall	Split 1: 3 × 6 = 18 and (8 − 3) × 2 = 5 × 2 = 10; 18 + 10 = 28 square meters. Split 2: 8 × 2 = 16 and 3 × 4 = 12; 16 + 12 = 28 square meters.
