KCE PATHWAYS · GRADE 3 · UNIT 5: DATA AND DESIGN · WEEK 24 · SCIENCE

When Environments Change

Name: _____ **Date:** _____

PRE-LESSON WARM-UP · DO THIS BEFORE YOUR COMPUTER LESSON

Pre-Lesson Warm-Up: When Places Change

Write or draw what you already know. Guesses are welcome!

1. **Review from Week 23:** Name one animal group (a herd, pack, colony, or school). How does living in that group help the animals survive?

2. **Guess:** A pond dries up in a long drought. What could happen to the frogs that live there?

3. **Guess:** Where did the Burmese pythons now living in the Everglades first come from?

   Southeast Asia | Florida | Antarctica

4. Draw a place near you that changed, like a new road, a burned field, or a flooded yard. What lived there before?

5. Write one question you wonder about how environments change.

POST-LESSON CHALLENGE · DO THIS AFTER YOUR COMPUTER LESSON

Post-Lesson Activity: Habitat Detective

Play the Invasion Game with a grown-up first. Then show what you learned.

1. **My Invasion Game:** Start with 20 native animals and 1 python. Native animals left after Round 1: _____ Round 2: _____ Round 3: _____ Round 4: _____

2. **Find the mistake:** "It is kind to let a pet snake go free in the Everglades." Fix it and explain what the owner should do.

3. **Two steps:** A team removes 7 pythons a week for 4 weeks. Then it removes 5 more. How many pythons in all? Show your work.

4. **Use evidence:** Raccoon sightings in Everglades National Park dropped more than 99 percent after pythons spread. What do scientists think caused the drop? How do they know?

★ **Challenge:** Sort these as **native** or **invasive** in Florida: bobcat, Burmese python, raccoon, lionfish. Then write one way people can help the Everglades recover.

Looking Ahead: Next week is the **Unit 5 Science Checkpoint.** Review climates around the world, natural hazards, animal groups, and changing environments.
