Final Checkpoint — Voices of Change Review

Name: _____ **Date:** _____

PRE-LESSON WARM-UP · DO THIS BEFORE YOUR COMPUTER LESSON

Final Checkpoint Warm-Up: Voices of Change

Warm up with skills from Weeks 26–29. Show your work. It is fine to be unsure; this shows where you are starting.

1. Evaluate 6 + 4 × (9 − 2). Then write an expression for "subtract 3 from 20, then multiply by 5." (Do not evaluate it.)

2. Write 10^4 in standard form. Then find (a) 3.7×10^2 = _____ (b) $48 \div 10^3$ = _____

3. Multiply 0.7 × 0.6. Then divide 4.8 ÷ 0.6. Show how you placed each decimal point.

4. A shelf is 3/4 foot long and 2/3 foot wide. What is its area? Without multiplying, is 5/4 × 16 greater than or less than 16?

5. Someone says, "Fixing my bike was a Herculean job." Which myth does this allusion point to, and what does the speaker mean?

6. Which sentence is a bandwagon trap?

- Everyone in my class wants a garden, so the school should build one.
- A garden would give our class a place to study plants.
- Some parents worry that a garden would cost too much.

Final Checkpoint — Voices of Change Review

Name: _____ **Date:** _____

POST-LESSON CHALLENGE · DO THIS AFTER YOUR COMPUTER LESSON

Final Checkpoint Challenge: Voices of Change

Show your work, and write in complete sentences with correct capitals, commas, and quotation marks.

1. Two steps: a coach buys 6 water bottles that cost $2.75 each and 10^2 stickers that cost $0.05 each. What is the total cost?

2. Find the mistake: Elspeth says a 3 1/2-foot by 1 1/2-foot table has an area of 3 1/4 square feet, because 3 × 1 = 3 and 1/2 × 1/2 = 1/4. What went wrong? Find the correct area.

3. Be the editor. Rewrite each sentence correctly. a) dear library board b) The clues in the story points to the wind. c) Valentina said “the library should stay open late”.

4. Writing (4–5 sentences): write a persuasive letter to your family about which Unit 6 place to visit first. Use a claim, a transition with a comma, a reason with evidence, and a counterargument with a rebuttal. Avoid every reasoning trap.

★ **Challenge:** A model divides real distances in miles by 10^4 and shows them in centimeters. The Moon is about 239,000 miles from Earth. How many centimeters apart are the model Earth and Moon? A second model is 1/2 as long. How far apart are they there?
