KCE PATHWAYS · GRADE 3 · UNIT 6: BUILDING TOGETHER · WEEK 30 · FINAL CHECKPOINT

Final Checkpoint — Building Together Review — Teacher Lesson Plan & Answer Key

Learning objectives: Students show mastery of the Unit 6 math skills (multiplying by multiples of 10 and using the commutative, associative and distributive properties; area and perimeter, including combined rectangles and L shapes; whole numbers as fractions and fractions greater than 1; odd and even patterns and adding and subtracting within 1,000) and reading skills (folktales, retelling and the central message; opinion pieces with reasons, examples and linking words; comparing books in a series; research notes and two sources), including two-step problems, "which explanation is correct?" reasoning and "find the mistake" items. This is the last lesson of the 30-week KCE Pathways program.

Duration: 35–45 minutes
Materials: Computer or tablet with the lesson open · pencil · printed Final Checkpoint Pre & Post sheet

Lesson flow (as it appears on screen)

1. Title and name: the student types first and last name so results go to KingCretot Experience. Read the Pathway Points rules together: 2 tries per question, points only for a correct first try, and the answer and reason appear after a second miss. Introduce the Final Checkpoint, the last stop of the 30-week journey: Florian and Cosima are setting up the Finish Line Festival at their community center.
2. Warm-Up: A Quick Unit 6 Mix (6 pts, 3 each): one math item and one reading item from across the unit.
3. Picture It: The Finish Line Festival. The festival has 8 booths, one for each Unit 6 lesson (the Portland bike repair shop, Story Night in Tampa, the Chattanooga playground plans, the Mountain Kids Gazette, the Lancaster County pie bakery, The Buxton Beacon Kids, parade practice in New Orleans and the Alton eagle research table). Ask the student to name one skill from each booth.
4. Vocabulary Round-Up: 8 flip cards from across the unit (multiple of 10, distributive property, perimeter, area, fraction greater than 1, central message, opinion, source). Have the student say each meaning before flipping.
5. Pencil Break (Pre): the student opens or prints the Final Checkpoint Pre/Post sheet (grade3/prepost/KCE_Checkpoint_PrePost_G3W30.pdf) and completes Page 1 (Pre) before the review. Do not help yet; it shows what they remember. It mixes math and reading from all of Unit 6.
6. Math Review: Multiplying with Tens and Properties (Week 26, 6 pts). Tip: use the fact, then think in tens; with the break-apart trick, multiply BOTH parts.
7. Math Review: Area and Perimeter (Week 27, 6 pts). Tip: perimeter goes around (feet), area covers the inside (square feet); a square's perimeter is not its area.
8. Math Review: Fractions Greater Than 1 (Week 28, 6 pts). Tip: count by the denominator to find whole pies (18/6 = 3); same numerator, the bigger pieces win.
9. Math Review: Patterns, Adding, and Subtracting (Week 29, 6 pts). Tip: use an odd and even check, and regroup across zeros (900 = 8 hundreds, 9 tens, 10 ones).

10. Reading Review: Folktales and the Central Message (Week 26, 6 pts): a different text in each set (the fable Bramble Builds a Dam, Florian's retelling of Juan Bobo and His Pay, or a Story Night program card). Ask: what is the lesson, as a full sentence?
11. Reading Review: Opinion Pieces (Week 27, 6 pts): the same opinion piece in each set, Esperanza's We Need a Reading Tent! Ask: which sentence is off topic, and which reason has no example?
12. Reading Review: Comparing Books in a Series (Week 28, 6 pts): the same mini series in each set, Domenica and Bartleby (Book 1, The Block Bridge; Book 2, The Spilled Seeds). Compare the plot, the setting and how Domenica acts, with evidence.
13. Reading Review: Research and Two Sources (Week 29, 6 pts): the same two sources in each set, with the research question "What kind of home does a bald eagle need?" Point out that here Source A is the fact sheet and Source B is the magazine page, so the student must check the letters.
14. Match-Up Round (10 pts, 2 per first-try match): all three sets match Unit 6 math and reading vocabulary to meanings or examples.
15. Fix the Sentence (8 pts, 4 each): typed answers are checked exactly (capital letters for names and places, the city-and-state comma, the comma after a linking word that starts a sentence, list commas, end marks, and the one verb fix in Set 2 and Set 3); curly quotes and extra spaces are forgiven. Both serial-comma and no-serial-comma list forms are accepted.
16. Type-It Corral (8 pts, 4 each): one typed math answer and one typed reading word. Capital letters do not matter; spelling does.
17. Speed Arena and Keyboard Corral (XP only, not scored).
18. Boss Battle, Part 1: The Finish Line Festival (10 pts, 5 each): a flyer per set (the festival, the Pie Table, or the Story Corner), then a two-step math item and a reasoning item about the flyer.
19. Boss Battle, Part 2: The Grand Finale (10 pts, 5 each): an L-shaped stage that is not split for you (its area and a find-the-mistake perimeter), a number line in sixths (point A is 14/6), or ticket sales toward a goal of 1,000 with an odd-or-even explanation.
20. Pencil Break (Post): the student turns to Page 2 (Post) of the Final Checkpoint sheet (grade3/prepost/KCE_Checkpoint_PrePost_G3W30.pdf) and completes it, plus the ★ Challenge if time allows, before seeing the score.
21. Results (Final Checkpoint Complete!): the score out of 100 is sent to KingCretot Experience. 85 or higher shows "KCE Pathways Graduate!" with the congratulations message "You finished all 30 weeks of KCE Pathways! Unit 6 complete: you mastered Building Together!" and a big confetti burst; below 85 shows "Great Effort Today!" with encouragement ("Every great builder keeps building, one brick at a time."), and the next attempt brings a fresh question set (sets rotate 1, 2, 3). Both messages remind the student to finish the Post-Lesson Challenge sheet.

Lesson answer key with reasoning

Every scored item the student sees, in order, across all three rotating question sets. Each item allows 2 tries and earns Pathway Points only on a correct first try. The "why" is the same reasoning shown on screen after a second missed try.

WARM-UP: A QUICK UNIT 6 MIX (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
`w1_s0`	Set 1: What is 7 × 60? Think: 7 × 6 tens.	**420** (also accepted: four hundred twenty)	7 × 6 = 42, so 7 × 6 tens = 42 tens. 42 tens = 420.
`w2_s0`	Set 1: Books in a series always share the same ___. [main characters / problem / title / time of day]	**main characters**	A series is a group of books with the same main characters. Each book can have a new problem, a new title, and a new time.

ID	Question	Answer	Why (explain to student)
w1_s1	Set 2: How many fourths make 3 whole pies?	**12** (also accepted: 12 fourths, 12/4, twelve)	Each pie is 4 fourths. 3 pies are 4 + 4 + 4 = 12 fourths, so 3 = 12/4.
w2_s1	Set 2: Which is a good research note? [short key words in your own words, with the exact numbers / every word copied from the source / a guess about the answer / a long sentence with the numbers changed]	**short key words in your own words, with the exact numbers**	A good note is short, in your own words, and exact. Names, dates, and numbers never change.
w1_s2	Set 3: What is the area of a 4 by 9 rectangle, in square feet?	**36** (also accepted: 36 square feet, 36 sq ft, 36 sq. ft., 36 square foot, 36 square ft, thirty-six)	Area counts the square units inside: 4 × 9 = 36 square feet.
w2_s2	Set 3: What is the central message of a story? [the big lesson the story teaches / the name of the main character / the place where the story happens / the first event in the story]	**the big lesson the story teaches**	The central message is the big lesson. Say it as a full sentence that could help anyone.

MATH REVIEW: MULTIPLYING WITH TENS AND PROPERTIES (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
m26a_s0	Set 1: Two steps! Florian orders 6 boxes of bolts for the festival stage. Each box holds 40 bolts. He uses 170 bolts. How many bolts are left?	**70** (also accepted: 70 bolts, seventy)	Step 1: 6 × 40 = 6 × 4 tens = 24 tens = 240 bolts. Step 2: 240 − 170 = 70 bolts are left.
m26b_s0	Set 1: Which explanation is correct? Why does 3 × 60 have the same product as 6 × 30? [3 × 6 tens = 18 tens and 6 × 3 tens = 18 tens. Both products are 180. / Because 3 + 60 is the same as 6 + 30. / They do not have the same product. / Because you can always move a zero to any number.]	**3 × 6 tens = 18 tens and 6 × 3 tens = 18 tens. Both products are 180.**	3 × 60 = 18 tens = 180, and 6 × 30 = 18 tens = 180. The same fact, 3 × 6 = 18, is inside both.
m26a_s1	Set 2: Use the break-apart trick: 6 × 18 = 6 × 10 + 6 × 8. What is 6 × 18?	**108** (also accepted: one hundred eight)	6 × 10 = 60 and 6 × 8 = 48. 60 + 48 = 108.
m26b_s1	Set 2: Find the mistake. Benedikt says 9 × 13 = 9 × 10 + 3 = 93. What went wrong? [He forgot to multiply the 3 by 9. 9 × 10 + 9 × 3 = 90 + 27 = 117. / Nothing is wrong. 9 × 13 = 93. / He should add: 9 + 13 = 22. / He should find 9 × 1 = 9 and 9 × 3 = 27, so 9 × 13 = 36.]	**He forgot to multiply the 3 by 9. 9 × 10 + 9 × 3 = 90 + 27 = 117.**	The distributive property multiplies BOTH parts of 13 by 9: 9 × 10 = 90 and 9 × 3 = 27. 90 + 27 = 117.
m26a_s2	Set 3: Two steps! The stage crew stacks 2 crates. Each crate holds 4 boxes, and each box holds 40 nails. How many nails is that?	**320** (also accepted: 320 nails, three hundred twenty)	Group the factors: (2 × 4) × 40 = 8 × 40 = 32 tens = 320 nails.
m26c_s2	Set 3: Find the missing number: 6 × 20 + 6 × 50 = 6 × ___	**70** (also accepted: seventy)	Both products have 6 groups, so put the groups together: 20 + 50 = 70. Check: 120 + 300 = 420, and 6 × 70 = 420.

MATH REVIEW: AREA AND PERIMETER (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
m27a_s0	Set 1: Two steps! A rectangular stage has a perimeter of 22 feet and is 4 feet wide. What is its area, in square feet?	**28** (also accepted: 28 square feet, 28 sq ft, 28 sq. ft., 28 square foot, 28 square ft, twenty-eight)	Step 1: The two widths are 4 + 4 = 8 feet. 22 − 8 = 14 feet for the two lengths, so each length is 7 feet. Step 2: Area = 4 × 7 = 28 square feet.
m27b_s0	Set 1: Each rectangle below has a perimeter of 20 feet. Which one has the greatest area? [5 feet by 5 feet / 3 feet by 7 feet / 2 feet by 8 feet / 1 foot by 9 feet]	**5 feet by 5 feet**	The areas are 5 × 5 = 25, 3 × 7 = 21, 2 × 8 = 16, and 1 × 9 = 9 square feet. The square covers the most.
m27a_s1	Set 2: A banner wall starts as a 9 by 5 rectangle, but a 3 by 2 corner is cut out for a doorway. What is the area that is left, in square feet?	**39** (also accepted: 39 square feet, 39 sq ft, 39 sq. ft., 39 square foot, 39 square ft, thirty-nine)	Big rectangle: 9 × 5 = 45. Missing corner: 3 × 2 = 6. 45 − 6 = 39 square feet.
m27b_s1	Set 2: Find the mistake. Cosima says every rectangle with an area of 16 square feet has the same perimeter. What went wrong? [Same area does not mean same perimeter. A 2 by 8 rectangle has a perimeter of 20 feet, but a 4 by 4 square has only 16 feet. / Nothing is wrong. Same area always means same perimeter. / They all have a perimeter of 16 feet, the same as the area. / They all have a perimeter of 32 feet, because 16 + 16 = 32.]	**Same area does not mean same perimeter. A 2 by 8 rectangle has a perimeter of 20 feet, but a 4 by 4 square has only 16 feet.**	2 + 8 + 2 + 8 = 20 feet and 4 + 4 + 4 + 4 = 16 feet. A 1 by 16 rectangle needs 34 feet. Same area, different borders.
m27a_s2	Set 3: Two steps! A fence will go all the way around a 7 by 5 garden. Each foot of fence costs $4. How many dollars will the fence cost?	**96** (also accepted: $96, 96 dollars, $96.00, $ 96, ninety-six)	Step 1: Perimeter = 7 + 5 + 7 + 5 = 24 feet. Step 2: 24 × $4 = $96.
m27c_s2	Set 3: Find the mistake. Lysander says a square with 9-foot sides has a perimeter of 81 feet. Type the correct perimeter, in feet.	**36** (also accepted: 36 feet, 36 ft, 36 ft., thirty-six)	He found the area, 9 × 9 = 81 square feet. The perimeter is the distance around: 9 + 9 + 9 + 9 = 36 feet.

MATH REVIEW: FRACTIONS GREATER THAN 1 (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
m28a_s0	Set 1: Each pie is cut into 6 equal slices. The counter holds 18/6 of a pie. How many whole pies is that?	**3** (also accepted: 3 wholes, 3 whole pies, 3 pies, 3 whole, three)	Count by 6s: 6, 12, 18. That is 3 counts, so 18/6 = 3 whole pies.
m28b_s0	Set 1: Which fraction is between 3 and 4 on a number line? [14/4 / 11/4 / 16/4 / 10/4]	**14/4**	3 = 12/4 and 4 = 16/4. Only 14/4 is between them. 16/4 is exactly 4, and 11/4 and 10/4 are between 2 and 3.
m28a_s1	Set 2: Compare. Type <, >, or =. 7/3? 7/4	**>** (also accepted: greater than, is greater than, greater)	The numerators are the same. Thirds are bigger pieces than fourths, so 7 thirds is more than 7 fourths: 7/3 > 7/4.
m28b_s1	Set 2: Find the mistake. Esperanza says 7/2 of a pie is the same as 7 whole pies. What went wrong? [Halves come 2 to a pie. 7 halves make 3 whole pies and 1/2 of a pie more. / Nothing is wrong. 7/2 is 7 whole pies. / 7/2 is less than 1, because it is a fraction. / 7/2 is 2 whole pies, because the denominator is 2.]	**Halves come 2 to a pie. 7 halves make 3 whole pies and 1/2 of a pie more.**	Count by 2s: 2, 4, 6. That is 3 whole pies, and 7 − 6 = 1 half is left over. So 7/2 is 3 pies and 1/2 more.

ID	Question	Answer	Why (explain to student)
m28a_s2	Set 3: Two steps! The bakery cuts 3 pies into eighths and sells 13 slices. How many eighths are left?	**11** (also accepted: 11 eighths, 11 slices, 11/8, eleven)	Step 1: 3 pies = 3 × 8 = 24 eighths. Step 2: 24 − 13 = 11 eighths are left, or 11/8 of a pie.
m28c_s2	Set 3: Type the missing number: 11/3 =? whole pies and 2/3 more.	**3** (also accepted: 3 wholes, 3 whole pies, 3 pies, 3 whole, three)	Count by 3s: 3, 6, 9. That is 3 whole pies, and 11 − 9 = 2 thirds are left over.

MATH REVIEW: PATTERNS, ADDING, AND SUBTRACTING (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
m29a_s0	Set 1: Is 53 + 29 odd or even? Type odd or even.	**even** (also accepted: it is even, it's even, even number, an even number)	53 is odd and 29 is odd. Odd + odd is even. Check: 53 + 29 = 82, and 82 ends in 2.
m29b_s0	Set 1: Find the mistake. Winifred says 64 + 27 = 90. How can you tell she is wrong without adding? [64 is even and 27 is odd, so the sum must be odd. 90 is even. The correct sum is 91. / Nothing is wrong. 64 + 27 = 90. / The sum must be even, so 90 could be right. / Two-digit numbers always add up to a number that ends in 0.]	**64 is even and 27 is odd, so the sum must be odd. 90 is even. The correct sum is 91.**	Even + odd is always odd, so an even answer like 90 cannot be right. 64 + 27 = 91.
m29a_s1	Set 2: The parade route is 900 yards long. The band has marched 476 yards. How many yards are left?	**424** (also accepted: 424 yards, 424 yd, four hundred twenty-four)	Regroup 900 as 8 hundreds, 9 tens, 10 ones. 10 − 6 = 4, 9 − 7 = 2, 8 − 4 = 4. So 424 yards. Check: 424 + 476 = 900.
m29b_s1	Set 2: Which explanation is correct? Why is each number in the 8s row double the number above it in the 4s row? [8 = 2 × 4, so 8 times a number is 2 times the 4s product. For example, 4 × 7 = 28 and 8 × 7 = 56. / Because 8 is 4 more than 4, so you add 4 each time. / Because every number in the table is even. / It is not true. The 8s row is half of the 4s row.]	**8 = 2 × 4, so 8 times a number is 2 times the 4s product. For example, 4 × 7 = 28 and 8 × 7 = 56.**	By the associative property, 8 × 7 = (2 × 4) × 7 = 2 × (4 × 7) = 2 × 28 = 56. Double 28 is 56.
m29a_s2	Set 3: Two steps! The band had 600 strings of beads. They tossed 245 on the first block and 178 on the second block. How many strings are left?	**177** (also accepted: 177 strings, 177 strings of beads, one hundred seventy-seven)	Step 1: 245 + 178 = 423 strings tossed. Step 2: 600 − 423 = 177 strings are left.
m29c_s2	Set 3: Two steps! In the addition table, start at 3 + 5 = 8. Move 2 squares down and then 4 squares to the right. What is the sum in that square?	**14** (also accepted: fourteen)	Each step down adds 1 and each step to the right adds 1. 8 + 2 = 10, and 10 + 4 = 14. That square is 5 + 9 = 14.

READING REVIEW: FOLKTALES AND THE CENTRAL MESSAGE (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
r26a_s0	Set 1: *Read this story Bramble Builds a Dam Bramble the young beaver wanted to build the biggest dam in the pond, all by herself. "I don't need anyone," she said. Turtle offered to roll stones to her. Heron offered to carry long sticks. "No, thank you," said Bramble. Twice the rushing water knocked her dam down. At last, Bramble asked for help. Turtle rolled the stones, Heron carried the sticks, and Bramble packed the mud. By sunset, the dam stood strong. "Many friends make strong walls," Bramble said.* Retell the BEGINNING: Bramble wants to build the biggest dam all by ___. Type one word.	**herself** (also accepted: her self, by herself)	The story begins: Bramble wanted to build the biggest dam in the pond, all by herself. That is her problem.
r26b_s0	Set 1: Find the mistake! Benedikt says the central message of Bramble Builds a Dam is "beavers." What went wrong? [Beavers is a topic. The message is a lesson, like "Working together helps us do hard jobs we cannot do alone." / Nothing went wrong. One word is a central message. / The story has no message. / The message is "Turtle rolled stones," because that happens in the story.]	**Beavers is a topic. The message is a lesson, like "Working together helps us do hard jobs we cannot do alone."**	A central message is a full-sentence lesson. Bramble failed alone, then the friends built a strong dam together.
r26a_s1	Set 2: *Read this retelling Florian's Retelling Here is Florian's retelling of Juan Bobo and His Pay: "First, a dairy farmer paid Juan with a pail of milk, and he poured it into a sack. Next, a farmer paid him a few coins, and they fell through the holes in his pocket. Then Juan carried a piece of cheese on his head, and it melted. Last, he dragged a ham home on a string, and the cats and dogs ate it."* In the tale, Juan Bobo dragged the ham home on a ___. Type one word.	**string** (also accepted: a string)	Juan tied a string around the ham and dragged it home. The cats and dogs nibbled it, and only the string was left.
r26b_s1	Set 2: Find the mistake! What is wrong with Florian's retelling? [The order is wrong. In the tale, Juan was paid with coins first, and then with the pail of milk. / Nothing is wrong. The order is correct. / Juan Bobo never carried cheese. / A retelling should copy the tale word for word.]	**The order is wrong. In the tale, Juan was paid with coins first, and then with the pail of milk.**	A retelling must keep events in order: coins, then milk, then cheese, then ham. Florian switched the first two.
r26a_s2	Set 3: *Read this program card Story Night Program Anansi and the Pot of Wisdom: a folktale of the Akan people of Ghana. A spider tries to keep all the wisdom for himself. Juan Bobo and His Pay: a folktale from Puerto Rico. A silly boy carries each new pay the wrong way. Momotarō, the Peach Boy: a folktale from Japan. A brave boy shares his dumplings with a dog, a monkey, and a pheasant, and they beat the ogres together.* Which main character comes from a tale from Puerto Rico? Type his name.	**Juan Bobo** (also accepted: Juan)	The card says Juan Bobo and His Pay is a folktale from Puerto Rico.

ID	Question	Answer	Why (explain to student)
r26b_s2	Set 3: Which explanation is correct? Lysander says Anansi and Momotarō teach about sharing from opposite sides. Winifred says the two tales teach nothing alike. [Lysander is right. Anansi will not share and fails, but Momotarō shares his dumplings and succeeds. / Winifred is right, because one tale has a spider. / Winifred is right, because the tales come from different places. / Neither is right, because folktales never teach lessons.]	**Lysander is right. Anansi will not share and fails, but Momotarō shares his dumplings and succeeds.**	Both tales are about sharing. Anansi keeps the wisdom and loses it; Momotarō shares and wins with his team.

READING REVIEW: OPINION PIECES (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
r27a_s0	Set 1: *Read this opinion piece We Need a Reading Tent! by Esperanza, age 8 I think our festival should have a reading tent. First, a tent gives families a quiet place to rest. For example, last year many families sat on the hot steps, because there was no shade. Second, books help kids learn. Also, my dog likes to chase balls. Therefore, a reading tent would make our festival even better!* Type the linking word Esperanza uses to start her conclusion.	**therefore** (also accepted: therefore,)	Therefore tells the reader that the conclusion is coming: a reading tent would make the festival even better.
r27b_s0	Set 1: Which sentence is off topic and should be cut? [Also, my dog likes to chase balls. / First, a tent gives families a quiet place to rest. / I think our festival should have a reading tent. / Second, books help kids learn.]	**Also, my dog likes to chase balls.**	A dog chasing balls has nothing to do with a reading tent. Off-topic sentences make an opinion piece weaker.
r27a_s1	Set 2: *Same passage as Set 1.* Type the linking word that adds one more idea: "The tent keeps the books dry. ___, it gives shade on sunny days."	**also** (also accepted: also,)	The second sentence adds one more good thing about the tent, so the linking word is Also.
r27b_s1	Set 2: Which explanation is correct? Benedikt says Esperanza's opinion is wrong, because a games tent is better. Cosima says an opinion is not right or wrong; readers judge how well it is supported. [Cosima is right. An opinion cannot be proven true or false, but it can be supported well or poorly. / Benedikt is right, because games are more fun. / Benedikt is right, because every opinion is a fact. / Neither is right, because opinions need no support.]	**Cosima is right. An opinion cannot be proven true or false, but it can be supported well or poorly.**	Opinions are not right or wrong. A reader asks: does the writer give reasons and examples?
r27a_s2	Set 3: *Same passage as Set 1.* Two steps! Find Esperanza's reason that has NO example. Then type its last word: "Books help kids ___."	**learn** (also accepted: learn.)	Step 1: Her first reason has an example (families on the hot steps). Step 2: Her second reason, Books help kids learn, has no example to prove it.

ID	Question	Answer	Why (explain to student)
r27b_s2	Set 3: Which example would BEST support the reason “Books help kids learn”? [For example, our class learned how sea turtles hatch from a library book. / I really, really love books. / Therefore, we should have a tent. / My dog likes to chase balls.]	**For example, our class learned how sea turtles hatch from a library book.**	An example is a fact or detail that proves the reason. Learning about sea turtles from a book proves that books help kids learn.

READING REVIEW: COMPARING BOOKS IN A SERIES (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
r28a_s0	Set 1: *Read both books Domenica and Bartleby: a Mini Series Book 1: The Block Bridge. On a rainy afternoon, Domenica, age 8, and her little brother Bartleby, age 5, built a block bridge in the living room. Bartleby bumped the table, and the bridge crashed down. Domenica yelled at him, and Bartleby cried. Then Domenica felt bad. “Let’s build it again, together,” she said. This time, Bartleby handed her each block, and the bridge stood tall. Book 2: The Spilled Seeds. On a sunny Saturday morning, Domenica and Bartleby planted beans in the community garden. Bartleby tripped, and the seeds spilled everywhere. Domenica remembered when she yelled about the bridge. She took a deep breath and stayed calm. “It’s okay. Let’s pick them up together,” she said. They planted every seed, side by side.* In Book 2, Domenica takes a deep breath and stays ___. Type the trait word from the story.	**calm**	Book 2 says, “She took a deep breath and stayed calm.” In Book 1 she yelled, so she changed.
r28b_s0	Set 1: Which sentence compares the SETTINGS correctly? [Book 1 happens inside on a rainy afternoon, but Book 2 happens in a garden on a sunny morning. / Both books happen in the living room on a rainy afternoon. / Book 1 happens in the garden, but Book 2 happens in the living room. / Neither book has a setting.]	**Book 1 happens inside on a rainy afternoon, but Book 2 happens in a garden on a sunny morning.**	The setting is where and when. Book 1: the living room, a rainy afternoon. Book 2: the community garden, a sunny Saturday morning.
r28a_s1	Set 2: *Same passage as Set 1.* What is the problem in Book 1? Bartleby bumps the table, and the block ___ crashes down. Type one word.	**bridge**	In Book 1, the block bridge crashes down. In Book 2, the problem is new: the seeds spill.
r28b_s1	Set 2: Find the mistake! Lysander says the two books cannot be a series, because they have different problems and different places. What went wrong? [Books in a series share the same main characters. Each book can have a new problem and a new place. / Nothing went wrong. A series must have the same problem. / The books have different characters. / A series can only have one book.]	**Books in a series share the same main characters. Each book can have a new problem and a new place.**	Domenica and Bartleby are in both books. Same characters, new adventure: that is a series.

ID	Question	Answer	Why (explain to student)
r28a_s2	Set 3: *Same passage as Set 1.* Which event from Book 1 helps Domenica act differently in Book 2? She remembers when she ___ about the bridge. Type one word.	**yelled**	Book 2 says Domenica remembered when she yelled about the bridge. That memory helps her stay calm.
r28b_s2	Set 3: Which explanation is correct? Winifred says Domenica changes from Book 1 to Book 2. Benedikt says she acts the same in both books. [Winifred is right. Domenica yells in Book 1, but she stays calm and helps in Book 2. / Benedikt is right, because Domenica is in both books. / Benedikt is right, because she yells in both books. / Neither is right, because characters never show feelings.]	**Winifred is right. Domenica yells in Book 1, but she stays calm and helps in Book 2.**	Compare her actions: she yells at Bartleby in Book 1, but in Book 2 she takes a deep breath and says, "Let's pick them up together."

READING REVIEW: RESEARCH AND TWO SOURCES (3 POINTS EACH)

ID	Question	Answer	Why (explain to student)
r29a_s0	Set 1: *Read both sources Research question: What kind of home does a bald eagle need? Source A · a fact sheet: Bald eagles live near lakes, rivers, and coasts, where they can catch fish. They eat mostly fish. They build giant nests of sticks. A nest can be up to 10 feet across and weigh up to 2,000 pounds. Source B · a magazine page: In 1963, only 417 nesting pairs of bald eagles were left in the lower 48 states. A chemical called DDT made their eggshells thin and weak. In 1972, the United States banned DDT. By 2019, there were more than 71,000 nesting pairs.* Finish the note from Source A: "Nest up to ___ pounds (A)." Type the number.	**2,000** (also accepted: 2000, two thousand, 2,000 pounds, 2000 pounds)	Source A says a nest can weigh up to 2,000 pounds. A note keeps the number exactly the same.
r29b_s0	Set 1: Which fact does NOT answer the research question about an eagle's home? [In 1972, the United States banned DDT. / Bald eagles live near lakes, rivers, and coasts. / They build giant nests of sticks. / A nest can be up to 10 feet across.]	**In 1972, the United States banned DDT.**	Banning DDT is part of the comeback story. It does not tell what kind of home an eagle needs.
r29a_s1	Set 2: *Same passage as Set 1.* Which source would you use to answer "How many nesting pairs were left in 1963?" Type A or B.	**B** (also accepted: source b, source B)	Only Source B, the magazine page, tells about 1963: only 417 nesting pairs were left.
r29b_s1	Set 2: Find the mistake! Florian's note says "1972: DDT banned (A)." What went wrong? [The fact is right, but the letter is wrong. DDT is only in Source B, so the note needs a B. / DDT was banned in 1963. / Notes should never have a letter. / Nothing went wrong.]	**The fact is right, but the letter is wrong. DDT is only in Source B, so the note needs a B.**	Always check who said what. Source A tells about homes and food. Source B tells about DDT and 1972.

ID	Question	Answer	Why (explain to student)
r29a_s2	Set 3: *Same passage as Set 1.* Finish the note with the exact number: "2019: more than ___ pairs (B)."	**71,000** (also accepted: 71000, seventy-one thousand, seventy one thousand)	Source B says that by 2019, there were more than 71,000 nesting pairs. Keep the number exactly the same.
r29b_s2	Set 3: Which explanation is correct? Cosima puts the note "1963: only 417 pairs left (B)" in the PROBLEM group of a comeback report. Lysander says it belongs in the COMEBACK group. [Cosima is right. 417 pairs shows how low the eagles fell before they came back. / Lysander is right, because 417 is a big number. / Lysander is right, because every number goes in the comeback group. / Neither is right. The note belongs in no group.]	**Cosima is right. 417 pairs shows how low the eagles fell before they came back.**	The problem group tells why the eagles almost disappeared. Only 417 pairs left is part of that problem.

MATCH-UP ROUND (2 POINTS PER FIRST-TRY MATCH)

ID	Question	Answer	Why (explain to student)
match_s0_1	Set 1: Match commutative property	**3 × 40 = 40 × 3**	2 points if matched on the first try.
match_s0_2	Set 1: Match perimeter	**the distance around a shape**	2 points if matched on the first try.
match_s0_3	Set 1: Match area	**square units that cover a shape**	2 points if matched on the first try.
match_s0_4	Set 1: Match folktale	**a made-up story told out loud for generations**	2 points if matched on the first try.
match_s0_5	Set 1: Match conclusion	**the ending that says the opinion again**	2 points if matched on the first try.
match_s1_1	Set 2: Match distributive property	**4 × 18 = 4 × 10 + 4 × 8**	2 points if matched on the first try.
match_s1_2	Set 2: Match denominator	**how many equal parts make 1 whole**	2 points if matched on the first try.
match_s1_3	Set 2: Match even number	**splits into pairs with none left over**	2 points if matched on the first try.
match_s1_4	Set 2: Match series	**books with the same main characters**	2 points if matched on the first try.
match_s1_5	Set 2: Match source	**a place where facts come from**	2 points if matched on the first try.
match_s2_1	Set 3: Match associative property	**(2 × 4) × 30 = 2 × (4 × 30)**	2 points if matched on the first try.
match_s2_2	Set 3: Match fraction greater than 1	**a numerator bigger than its denominator**	2 points if matched on the first try.
match_s2_3	Set 3: Match central message	**the big lesson a story teaches**	2 points if matched on the first try.
match_s2_4	Set 3: Match example	**a fact or detail that proves a reason**	2 points if matched on the first try.
match_s2_5	Set 3: Match note	**a short reminder of a fact**	2 points if matched on the first try.

FIX THE SENTENCE (4 POINTS EACH)

ID	Question	Answer	Why (explain to student)
fs1_s0	Set 1: Fix the sentence: florian and cosima visited portland oregon	**Florian and Cosima visited Portland, Oregon.**	Florian and Cosima are names, and Portland and Oregon are names of places, so they all get capital letters. Put a comma between the city and the state, and end with a period.
fs2_s0	Set 1: Fix the sentence: for example the tent has books maps and games	**For example, the tent has books, maps, and games.** (also accepted: For example, the tent has books, maps and games.)	Start with a capital F. Put a comma after For example at the start of the sentence, put commas between the things in the list, and end with a period.
fs1_s1	Set 2: Fix the sentence: did juan bobo carry the cheese on his head	**Did Juan Bobo carry the cheese on his head?**	Start with a capital D. Juan Bobo is a name, so both words get capital letters. This sentence asks something, so it ends with a question mark.
fs2_s1	Set 2: Fix the sentence (one verb is wrong, and there are many eagles): the eagles builds giant nests	**The eagles build giant nests.**	Start with a capital T. Eagles means more than one, so use build, not builds. End with a period.
fs1_s2	Set 3: Fix the sentence: therefore we should build a reading tent	**Therefore, we should build a reading tent.**	Start with a capital T. Put a comma after Therefore when it starts a sentence, and end with a period.
fs2_s2	Set 3: Fix the sentence (one verb is wrong, and there are two people): domenica and bartleby was in the garden	**Domenica and Bartleby were in the garden.**	Domenica and Bartleby are names, so they get capital letters. Two people means use were, not was. End with a period.

TYPE-IT CORRAL (4 POINTS EACH)

ID	Question	Answer	Why (explain to student)
t1_s0	Set 1: Two steps! The festival has 5 rows of chairs with 20 chairs in each row. Then the crew adds 35 more chairs. How many chairs is that in all?	**135** (also accepted: 135 chairs, one hundred thirty-five)	Step 1: 5 × 20 = 5 × 2 tens = 10 tens = 100 chairs. Step 2: 100 + 35 = 135 chairs.
t2_s0	Set 1: A person who can wait calmly without getting upset is ___.	**patient**	Patient means able to wait calmly. In The Buxton Beacon Kids, Gael learned to be patient.
t1_s1	Set 2: Two steps! A square sandbox has a perimeter of 24 feet. What is its area, in square feet?	**36** (also accepted: 36 square feet, 36 sq ft, 36 sq. ft., 36 square foot, 36 square ft, thirty-six)	Step 1: A square has 4 equal sides, and 24 ÷ 4 = 6 feet. Step 2: Area = 6 × 6 = 36 square feet.
t2_s1	Set 2: A place where facts come from, like an article or a fact card, is called a ___.	**source** (also accepted: a source)	A source gives a researcher facts. Good researchers read more than one source.
t1_s2	Set 3: Compare. Type <, >, or =. 13/4? 3	**>** (also accepted: greater than, is greater than, greater)	3 = 12/4. 13 fourths is 1 fourth more than 12 fourths, so 13/4 > 3.
t2_s2	Set 3: Type the linking word that comes before a reason: “We need a tent, ___ the sun is hot.”	**because**	Because comes before a reason. The sun is hot is WHY we need a tent.

BOSS BATTLE: THE FINISH LINE FESTIVAL (5 POINTS EACH)

ID	Question	Answer	Why (explain to student)
bb1_s0	Set 1: *Florian and Cosima's flyer The Finish Line Festival Come to the Finish Line Festival this Saturday at the community center! The festival has fun for everyone. For example, there will be a pie table, a bike parade, and a story corner. Our class baked cupcakes for 4 tables, with 30 cupcakes on each table. Therefore, nobody will go home hungry!* Two steps! Before noon, families ate 85 cupcakes. How many cupcakes are left?	**35** (also accepted: 35 cupcakes, thirty-five)	Step 1: 4 tables × 30 cupcakes = 4 × 3 tens = 12 tens = 120 cupcakes. Step 2: 120 − 85 = 35 cupcakes are left.
bb2_s0	Set 1: The flyer gives the reason "The festival has fun for everyone." Which sentence is the EXAMPLE that proves it? [For example, there will be a pie table, a bike parade, and a story corner. / Come to the Finish Line Festival this Saturday at the community center! / Therefore, nobody will go home hungry! / Our class baked cupcakes for 4 tables.]	**For example, there will be a pie table, a bike parade, and a story corner.**	For example comes right before an example. A pie table, a bike parade, and a story corner prove there is fun for everyone.
bb1_s1	Set 2: *Florian and Cosima's flyer The Pie Table Visit the Pie Table at the Finish Line Festival! We baked 5 apple pies and cut each one into fourths. We also baked 3 cherry pies and cut each one into sixths. Every slice is the same size within its pie, and every pie is the same size.* Two steps! How many slices of pie are on the Pie Table in all?	**38** (also accepted: 38 slices, thirty-eight)	Step 1: 5 apple pies × 4 fourths = 20 slices, and 3 cherry pies × 6 sixths = 18 slices. Step 2: 20 + 18 = 38 slices.
bb2_s1	Set 2: Which explanation is correct? Esperanza says the cherry slices make 18/6 of a pie, which is 3 whole pies. Benedikt says 18/6 is less than 1, because it is a fraction. [Esperanza is right. Count by 6s: 6, 12, 18. That is 3 whole pies. / Benedikt is right. Every fraction is less than 1. / Benedikt is right, because 6 is less than 18. / Neither is right. 18/6 is 18 whole pies.]	**Esperanza is right. Count by 6s: 6, 12, 18. That is 3 whole pies.**	A fraction can be greater than 1. When the numerator is bigger than the denominator, it is more than 1 whole: 18/6 = 3.
bb1_s2	Set 3: *Florian and Cosima's flyer The Story Corner Stop by the Story Corner at the Finish Line Festival! Three readers will tell Anansi and the Pot of Wisdom, Juan Bobo and His Pay, and Momotarō, the Peach Boy. The corner has 6 rows with 9 seats in each row, so come early to get a seat!* Two steps! 38 people sit down in the Story Corner. How many seats are still empty?	**16** (also accepted: 16 seats, sixteen)	Step 1: 6 rows × 9 seats = 54 seats. Step 2: 54 − 38 = 16 empty seats.
bb2_s2	Set 3: Find the mistake. Winifred says Juan Bobo is a real person, because his tale names a real place, Puerto Rico. What went wrong? [A folktale can name a real place and still be made up. Juan Bobo is a story character, not a real person. / Nothing went wrong. Every story with a real place is true. / Juan Bobo's tale comes from Japan. / Folktales never name places.]	**A folktale can name a real place and still be made up. Juan Bobo is a story character, not a real person.**	Juan Bobo and His Pay is a folktale: a made-up story that people in Puerto Rico have told out loud for many generations.

BOSS BATTLE: THE GRAND FINALE (5 POINTS EACH)

ID	Question	Answer	Why (explain to student)
bb3_s0	Set 1: Two steps! The festival stage is L-shaped. It is not split for you. What is its area, in square feet?	**51** (also accepted: 51 square feet, 51 sq ft, 51 sq. ft., 51 square foot, 51 square ft, fifty-one)	Big rectangle: 9 × 7 = 63. Missing corner: 4 × 3 = 12. 63 − 12 = 51 square feet. Or split it: 5 × 7 = 35 and 4 × 4 = 16, and 35 + 16 = 51.
bb4_s0	Set 1: Find the mistake. Florian finds the perimeter of the stage by adding 9 + 7 + 5 + 4 = 25 feet. What went wrong? [He left out the 3-foot and 4-foot sides of the step. All six sides: 9 + 7 + 5 + 3 + 4 + 4 = 32 feet. / Nothing is wrong. The perimeter is 25 feet. / He should multiply: 9 × 7 = 63 feet. / He should add only the two longest sides: 9 + 7 = 16 feet.]	**He left out the 3-foot and 4-foot sides of the step. All six sides: 9 + 7 + 5 + 3 + 4 + 4 = 32 feet.**	An L shape has six sides, and the perimeter is the whole distance around. 9 + 7 + 5 + 3 + 4 + 4 = 32 feet.
bb3_s1	Set 2: Cosima marks how many pies are left on this number line. What fraction names point A? Use a denominator of 6.	**14/6** (also accepted: 14 / 6, 14 sixths, fourteen sixths)	Each whole has 6 jumps. 2 = 12/6, and point A is 2 jumps past 2. That is 14/6.
bb4_s1	Set 2: Two steps! Which is true about point A? [14/6 is 2 whole pies and 2/6 of a pie more, so it is between 2 and 3. / 14/6 is 14 whole pies. / 14/6 is between 1 and 2. / 14/6 is 2 whole pies and 4/6 of a pie more.]	**14/6 is 2 whole pies and 2/6 of a pie more, so it is between 2 and 3.**	Step 1: Count by 6s: 6, 12. That is 2 whole pies. Step 2: 14 − 12 = 2 sixths are left over. So 14/6 is between 2 and 3.
bb3_s2	Set 3: Two steps! The festival sold 368 tickets on Friday and 457 tickets on Saturday. The goal was 1,000 tickets. How many more tickets do they need to reach the goal?	**175** (also accepted: 175 tickets, 175 more, 175 more tickets, one hundred seventy-five)	Step 1: 368 + 457 = 825 tickets. Step 2: 1,000 − 825 = 175 more tickets. Check: 825 + 175 = 1,000.
bb4_s2	Set 3: Which explanation is correct? Lysander says 368 + 457 must be odd. Esperanza says it must be even. [Lysander is right. 368 is even and 457 is odd, and even + odd is always odd. / Esperanza is right, because both numbers are big. / Esperanza is right, because odd + even is even. / Neither is right. You cannot tell without adding.]	**Lysander is right. 368 is even and 457 is odd, and even + odd is always odd.**	Even + odd is always odd. The sum, 825, ends in 5, so it checks.

Pre & Post sheet answer guide

Many items are open-ended. Grade for genuine understanding and complete sentences, not exact wording. Sheet: grade3/prepost/KCE_Checkpoint_PrePost_G3W30.pdf.

PRE-LESSON WARM-UP

#	Prompt	Model answer / grading note
1	What is 9 × 40? (Think: 9 × 4 tens.)	360. 9 × 4 = 36, so 9 × 4 tens = 36 tens = 360.
2	A rectangle is 3 feet by 8 feet: perimeter and area	Perimeter: 3 + 8 + 3 + 8 = 22 feet. Area: 3 × 8 = 24 square feet.
3	Which fraction is equal to 2 whole pies? (8/4, 2/4, 4/8)	8/4. Count by 4s: 4, 8. That is 2 whole pies.
4	Is 35 + 46 odd or even?	odd. 35 is odd and 46 is even, and odd + even is odd (35 + 46 = 81).

#	Prompt	Model answer / grading note
5	“I think we should plant a garden, because fresh vegetables are healthy.” The writer’s reason	Fresh vegetables are healthy. (The reason comes right after because.)
6	Which is a good research note?	short, in my own words, with exact numbers

POST-LESSON CHALLENGE

#	Prompt	Model answer / grading note
1	4 boxes hold 60 spokes each; Florian uses 75	Step 1: 4 × 60 = 24 tens = 240 spokes. Step 2: 240 − 75 = 165 spokes left.
2	Benedikt says 7 × 16 = 7 × 10 + 6 = 76	He forgot to multiply the 6 by 7. 7 × 10 + 7 × 6 = 70 + 42 = 112.
3	3 pies cut into fourths; Cosima sells 7 slices	5/4 of a pie. 3 pies = 12 fourths, and 12 − 7 = 5 fourths left (1 whole pie and 1/4 more).
4	Domenica yelled in Book 1; “This time, Domenica smiled and helped Bartleby.” Compare with but	Model: In Book 1, Domenica yelled at Bartleby, but this time she smiled and helped him. Accept any sentence that uses but and shows she changed.

★ CHALLENGE

#	Prompt	Model answer / grading note
1	6 by 5 rectangle with a 2 by 2 corner cut out: area of the L shape	26 square feet. 6 × 5 = 30 and 2 × 2 = 4, and 30 − 4 = 26. Check that the drawing shows the corner removed.
