Deja's Food Drive

Name: _____ Date: _____

PRE-LESSON WARM-UP · DO THIS BEFORE YOUR COMPUTER LESSON

Before the Trucks Arrive

Deja's class ran a canned food drive for the whole month, and now every can needs to be divided evenly between local food pantries. Before you meet her, warm up your division skills.

1 Match each word to its meaning. Draw a line, or write the matching letter next to each word.

___ **divisor**	**A.** A smart, quick guess made by rounding first.
___ **dividend**	**B.** The number you are dividing BY.
___ **quotient**	**C.** Splitting a total so every group gets the exact same amount.
___ **remainder**	**D.** The answer to a division problem.
___ **equal groups**	**E.** The number being divided.
___ **estimate**	**F.** What's left over when a number doesn't divide evenly.

2 Warm up with a single-digit review: 96 ÷ 8 = ? Show your steps (divide, multiply, subtract, bring down).

3 Have you ever had to split something evenly among a group of people? Write 1–2 sentences about it.

Deja's Food Drive

Name: _____ **Date:** _____

POST-LESSON CHALLENGE · DO THIS AFTER YOUR COMPUTER LESSON

Closing Out the Drive

Great work on today's lesson! Now show off what you learned about long division with 2-digit divisors.

1 A SECOND round of donations brings in 420 cans, still split between 24 pantries. How many cans per pantry, and is there a remainder?

2 On top of the 17 late cans from the lesson, 19 MORE cans arrive (36 extra total). Can all 24 pantries now get 1 more can each? Show your division to explain.

3 Extension: 675 ÷ 27 = ? Show every step (divide, multiply, subtract, bring down).

★ **Challenge:** Write your own real-world division word problem using a 2-digit divisor that leaves a remainder. Then solve it.

Looking Ahead: Next week we work with fractions that DON'T share a denominator — Sophia needs help planning her garden! Bring this sheet back to your next lesson.
